CYBERSECURITY OCCUPATIONS IN MISSISSIPPI

Profiling Cybersecurity-Related Job Openings, Job Seekers, and Recent Graduates

September 2022

ABOUT MISSISSIPPI'S SLDS

Mississippi's State Longitudinal Data System (SLDS) is one of the most comprehensive systems in the country and includes administrative records from more than 25 education, workforce, and human service agencies in the state. The SLDS allows for the alignment of multiple sources of de-identified administrative data over time to evaluate educational or workforce strategies in terms of real outcomes, such as entrance into employment, wages, and skill gains.

ABOUT NSPARC

NSPARC is university research center at Mississippi State University and is a trusted and reliable source for high-quality research and analysis. We specialize in use-inspired research, data analytics, and software architecture and development. Our research emphasizes workforce and economic development, but the diversity of expertise on our team means we cover a broad range of topics in education, economics, health, human services, and corrections. Unique experience with administrative records and longitudinal data systems, matched with our ability to apply the latest methodological and machine learning approaches allows us to draw meaningful insights from data to address challenges faced by policymakers, employers, economic developers, and state agencies.

For more information, contact NSPARC at nsparc@nsparc.msstate.edu or 662-325-924.

CYBERSECURITY OCCUPATIONS IN MISSISSIPPI
Profiling Cybersecurity-Related Job Openings, Job Seekers, and Recent Graduates

OVERVIEW

This brief provides data pertaining to Mississippi's Cybersecurity workforce and the employer demand for employees with their skills. Data are included on individuals who have used Mississippi Works, the state's job board, to look for work ("job seekers") and have experience in cybersecurity-related occupations. Data are also included on graduates from Mississippi's public universities and community colleges who majored in cybersecurity-related degree programs. Finally, data are included on job postings by employers seeking skilled employees for in-state, out-of-state, and remote work in cybersecurity-related occupations.

The results of this analysis show that 553 credentialed job seekers with past experience in cybersecurity-related occupations have actively sought work in Mississippi in the past year. The results also show that, in Academic Year (AY) 2021, Mississippi's community college system produced 306 graduates from cybersecurity-related programs, and Mississippi's public universities produced an additional 507 graduates. Finally, the analysis shows that 12,160 in-state or remote-based cybersecurity jobs are available to Mississippians each year, and an additional 18,122 cybersecurity jobs are advertised to Mississippians who are willing to move out-of-state for work.

DATA

The following data were obtained from Mississippi's State Longitudinal Data System (SLDS) for use in the study:

MISSISSIPPI WORKS JOB SEEKER AND JOB OPENINGS DATA

Data on job openings and on individuals looking for work come from the Mississippi Department of Employment Security's (MDES) state job board, Mississippi Works. Mississippi Works allows employers to create job announcements, and it allows job seekers to search and apply for jobs. Real-time data from Mississippi Works can be used to determine the demand for labor in a region, as well as the number of people that are looking for work. Detailed information about the job seekers is also available, such as their place of residence, educational background, previous occupations, skills, and years of experience. For this study, we consider only job openings that have been open during the past 12 months (September 2021 – September 2022) and job seekers who have actively searched for employment during the same period. Approximately 160,000 job

MISSISSIPPI STATE UNIVERSITY™
NATIONAL STRATEGIC PLANNING
& ANALYSIS RESEARCH CENTER

seekers have used Mississippi Works in the last year, and approximately 43,000 companies are registered in the system.

MISSISSIPPI COMMUNITY COLLEGE AND PUBLIC UNIVERSITY DATA

Data on college graduates come from administrative records from Mississippi's 15 community colleges and eight public universities. These data include information on the enrollment, county of residence, academic major, and graduation for the approximately 81,000 students enrolled annually in public universities and 70,000 students enrolled in community colleges. Academic majors are cross-walked with relevant occupations using information from the National Center for Education Statistics (NCES). These data are updated annually with student records from the previous academic year.

INDICATORS

The following indicators were utilized to conduct this analysis:

Credentialed Job Seekers –individuals who have actively utilized Mississippi Works, within the past 12 months (September 2021 – September 2022), who have experience in a cybersecurity-related occupation, and who have completed a community college or university instructional program (including college certificate programs, 2-year degree programs, 4-year degree programs, and/or post-graduate degree programs).

Graduates –individuals who have graduated from a Mississippi public community college or university in AY 2021, and who majored in a cybersecurity-related degree program. Community college graduates who subsequently enrolled in a Mississippi public university are excluded from this measurement, as they are less likely to seek full-time employment until after completing their university education.

Job Openings –actively advertised job openings posted on Mississippi Works within the past 12 months (September 2021 – September 2022) seeking applicants for cybersecurity-related occupations.

METHODOLOGY

This analysis required the identification of cybersecurity-related occupations, graduates from related instructional programs, and related job openings. The methods for identifying these critical components are as follows.

IDENTIFYING JOB SEEKERS AND CYBERSECURITY-RELATED OCCUPATIONS

Occupations were identified using Standard Occupational Classification (SOC) System Codes, the federal occupation classification standard used by the U.S. Bureau of Labor Statistics. Occupations in the "Computer Occupation" classification category were selected, and job responsibilities were reviewed using resources available through the

Department of Labor's O*NET OnLine web portal (for example, a job responsibility of a Computer Network Support Specialist is to "analyze and report computer network security breaches or attempted breaches").

Using this information, occupations were sorted into three groups. The first group are the Directly-Related Occupations; occupations in this group have clear associations to the cybersecurity field. The second group are the Partially-Related Occupations; occupations in this group have some overlap with cybersecurity tasks, but have other primary responsibilities. The third group are Occupations with Transferrable Skills; these are occupations which require technology skills that partially overlap with the skills required to work in an occupation directly related to cybersecurity. Computer occupations deemed to be unrelated to cybersecurity are excluded from this analysis.

A comprehensive list of all job seekers who actively searched for work on Mississippi's official Job Board, Mississippi Works, was created for the study period (September 2021 – September 2022). The past work history of each active job seeker was examined to determine if the job seeker indicates experience in one or more of the identified cybersecurity-related occupations. This list of nearly 2,000 job seekers with cybersecurity-related experience was then narrowed to include only the 553 job seekers who hold a college or university credential, such as a college certificate, a 2-year degree, a 4-year degree, or a post-graduate degree.

IDENTIFYING GRADUATES OF CYBERSECURITY-RELATED INSTRUCTIONAL PROGRAMS

To identify relevant instructional programs, each occupation's SOC code was cross-walked to a Classification of Instructional Programs (CIP) code, the national standard of academic program titles developed by the U.S. Department of Education. If a single degree program was matched to multiple occupations, the description of the degree program was used in conjunction with the occupational descriptions to determine the most appropriate match.

To count the graduates of these programs, administrative data was used to identify students graduating in AY 2021 in the Fall, Spring, or Summer semester. Graduates from community colleges were also examined to determine if they subsequently enrolled in a Mississippi public university, as these students are less likely to pursue full-time employment until completing their university education; these students were removed from the graduate counts reported in this analysis.

IDENTIFYING CYBERSECURITY-RELATED JOB OPENINGS

A comprehensive list of job openings was extracted from Mississippi Works. All job openings posted in Mississippi Works include an SOC code; this code was compared to the previously-defined list of cybersecurity SOC codes to identify cybersecurity-related job openings.

Due to the fact that Mississippi Works includes the capability for employers to post job openings outside of Mississippi, each posting was examined to classify the identified cybersecurity-related job openings into four distinct categories:

In-State Openings – a job posting which specifies that the job site or employer location is in Mississippi.

Possible In-State Openings – a job posting which lists Mississippi as one potential location for work, and which is posted by an employer with a physical presence in the state.

Out-of-State Openings – a job posting which either (a) lists the job site as a state other than Mississippi, or (b) lists Mississippi as a potential location for work but was posted by an employer without any physical presence in the state.

Remote Eligible Openings – a job posting advertising a telework-eligible posting. Postings which require the employee to be on-site part time (e.g., a posting advertising "50% telework) are excluded from this category and are instead placed into one of the prior three categories, according to the location of the part-time work site.

RESULTS

TABLE 1: MISSISSIPPI CREDENTIALED JOB SEEKERS IN CYBERSECURITY-RELATED OCCUPATIONS, SEPTEMBER 2021 – SEPTEMBER 2022

SOC	Occupation Title	Credentialed Job Seekers
Directly-Related Occupations		
15-1212	Information Security Analysts	25
15-1211	Computer Systems Analysts	95
15-1231	Computer Network Support Specialists	45
15-1299	Computer Occupations, All Other (Including Information Security Engineers, Digital Forensic Analysts, Penetration Testers, and Blockchain Engineers)	57
Subtotal		*222*
Partially-Related Occupations		
11-3021	Computer and Information Systems Managers	140
15-1221	Computer and Information Research Scientists	10
15-1245	Database Administrators and Architects	80
15-1241, 15-1244	Network and Computer Systems Administrators and Architects	41
Subtotal		*271*
Occupations with Transferrable Skills		
15-1251	Computer Programmers	24
15-1256	Software Developers, Software Quality Assurance Analysts, Testers	36
Subtotal		*60*
Total		*553*

Notes: This table reports the number of active job seekers with cybersecurity experience and credentials who have used the state job board, Mississippi Works, to search for employment within the past 12 months (June 2020 – June 2021). Job seekers must have completed a community college or university instructional program to be included in this analysis (i.e., a college certificate program, a 2-year degree program, a 4-year degree program, and/or a post-graduate degree program).
